Profile

I have been into development for more than 3 years now and since have explored various areas including but not limited to Android development , iOS development , API development , database management , web development , Supervised learning , reinforcement learning and more. I have more than 265 projects on Github with more being added and improved with time. I like develop software which is unique on It's own besides helping solving problems faced by people around the world. I primarily focus on building the designs which are minimalistic and aesthetic while being feature rich and providing quality experience to end users.

Projects/Experience

CEO and Developer lead, Paraviijyan LLP – 2020 - present
Paravijjyan was the some of very first products which got out into the public. It is basically an app which can help you do mindfulness practices in a modern way. Instead of providing a trainer in your yoga session we use AI to monitor and give you accuracy based on your performance.

CTO and Developer Lead , Lamarr Tech – 2021 - present
Lamarr Tech is the very recent project I worked on. It focuses on solving the problems of local business people by allowing them to have their very own app at a reasonable expense.

CEO and Developer lead, MLAI – 2018 - present
MLAI is one of my futuristic concepts(patented) of assisting medical staff in various aspects with unprecedented use of AI.

Education

Sheiling House School – Class 12 , 2021

Skills

Java , Python , Swift , Kotlin , HTML , CSS , React , NextJS , CSS , Flutter , Dart , Typescript , Javascript , Git , XML , Flask , and related technologies.
